

Mounting Plate MBI

MBI mounting plate is shown below. The modem slides into the MBI and is held in place with two thumb lock screws allowing the modem to be installed or removed without the use of tools. Ideally the MBI is bolted to “earth” ground to give optimum lightning protection and minimum EMI. If the modem has rubber feet, they must be removed before installing.

This mounting plate holds the following product.

- OM15E
- OM102
- OM102P
- ROUTE-HDLC
